

DAAN862: ANALYTICS PROGRAMMING IN PYTHON

Lesson 3: Statistical Analysis with Pandas

Lesson 3.4: Import and Export Data

Pandas features a number of functions for reading tabular data as a `DataFrame` object. The *pandas* I/O API is a set of top-level reader functions accessed like `pd.read_csv()` that generally return a *pandas* object. The corresponding writer functions are object methods that are accessed like `df.to_csv()`.

Import Data:

For import functions, we only introduce common ones: `read_csv`, `read_table`, and `read_excel`.

The details of `read_csv` function are listed below. You can specify the delimiter, header, names, index col, etc in the function.

Click the dropdown to view details of `read_csv`

```
pandas.read_csv(filepath_or_buffer, sep=',', delimiter=None, header='infer', names=None, index_col=None, usecols=None, squeeze=False, prefix=None, mangle_dupe_cols=True, dtype=None, engine=None, converters=None, true_values=None, false_values=None, skipinitialspace=False, skiprows=None, nrows=None, na_values=None, keep_default_na=True, na_filter=True, verbose=False, skip_blank_lines=True, parse_dates=False, infer_datetime_format=False, keep_date_col=False, date_parser=None, dayfirst=False, iterator=False, chunksize=None, compression='infer', thousands=None, decimal=b'.', lineterminator=None, quotechar='"', quoting=0, escapechar=None, comment=None, encoding=None, dialect=None, tupleize_cols=None, error_bad_lines=True, warn_bad_lines=True, skipfooter=0, skip_footer=0, doublequot
```
